

CONDOR CLED 2

FEATURES

- » 20kA/10kV Surge Protection
- » Patented 360 degree optic adjustability
- » Scalable Output
- » Standard 0-10V Dimming
- » Silicon Optic Technology
- » Tool-less Driver Housing Access
- » IP66 Construction of Optical and Driver Assembly
- » Zero Up light Rating (U0)
- » 3G Vibration Rating (ANSI C136.31-2001)
- » Designed and Manufactured in Fort Worth, Texas

RATINGS NOTES

1. Published lumen data guaranteed within the output tolerance of EnergyStar requirements
2. Weight will vary based upon selected options. Tolerance on published weight is +/-10%
3. DLC Listing applies to 4000K, 70CRI options as of January 23rd, 2019. Please check www.designlights.org for the most current listing status of the CLED2

CONDOR CLED 2

SECOND GENERATION LED HIGH MAST LUMINAIRE

DIMENSIONS

SPECIFICATIONS

GENERAL DESCRIPTION

The complete luminaire is ETL/cETL Listed in conformance to standards ANSI/UL1598 and CSA C22.2 No. 250.0 with an ambient temperature rating of -40C to no less than +50C. The luminaire is designed to thermally isolate the driver from the optical housing by a minimum of 3". The driver housing is fabricated of heavy duty die cast aluminum. The luminaire has been tested and certified to conform to Vibration Testing Standard ANSI C136.31-2001, 3G Loading, FCC 47CRF 15:2018 and ICES-005:2015.

HOUSING

To ensure long life of the driver, the housing is thermally isolated from the LED housing. The drivers are mounted to the sides of the housing to provide superior thermal management. The housing utilizes integrally cast cooling fins at the mounting location of the drivers. The housing accepts a standard 2" SCH 40 slip mount tenon and utilizes a heavy duty integrally cast tenon cradle. A heavy duty cast aluminum tenon support bracket is secured by a minimum of four 1/4" stainless steel bolts. The incoming power wire passes through an IP66 rated cable grip to protect against water and dust ingress into the driver housing. The driver housing is IP65 rated. The tenon clamp assembly permits adjustment of fixture level by +/- 5 degrees.

ELECTRICAL SYSTEM

The drivers accept the specified line voltage, to within +/- 10% without the aid of an integral step-down transformer. The drivers include integral transient surge protection in accordance with IEEE C62.41 6kV/6kV. The LED drivers have a minimum power factor of 0.95 with a Total Harmonic Distortion no greater than 20% with inrush current conforming to NEMA 410. The drivers meet FCC part 15 (Class A) Non-Consumer Limits. Drivers come standard with 0-10V dimming leads as well as output tuning. The system includes a secondary surge protection system with supplementary coverage in accordance with IEEE C62.41.2 C High with a maximum discharge current of 20kVA. The unit is provided with (2) LED drivers that power 1/2 of the LED chips in the luminaire ensuring failure of any one driver will not fully extinguish the luminaire.

LED ASSEMBLY

The optical assembly is constructed of optical grade silicon material that will not crack, fade or yellow. The desired lighting distribution is provided by using overlapping optical patterns such that failure of any one LED, complete LED board or driver shall not change the overall photometric distribution. The overall distribution is obtained without the use of external shields or louvers. The LED modules are mounted to a heat sinking housing that provides environmental protection and thermal management of the LEDs. The housing includes integrally cast cooling fins. The LED housing is fully rotatable for precision field aiming with integrally cast identification of house and street side on the LED housing. The LED housing is IP66 rated. The luminaire provides effective illumination to the target area while generating zero up light (U0 rating).

WARRANTY

The entire product shall be covered by a minimum five (5) year limited fixture warranty. Longer warranties are available, contact CHM for additional details.
